

Northstar Labs — 03 Teams

Fictional reference document created for RAG retrieval, chunking, embedding, vector search, metadata filtering, and multi-document QA testing.

1. Leadership

Maya Chen is CEO and Daniel Brooks is CTO. Priya Shah leads Product and Omar Reed leads Security.

Ravi Mehta leads Platform, Nora Wilson leads Applications, Isaac Kim leads Data, Sofia Alvarez leads AI Systems, and Marcus Lee leads Reliability.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

2. Platform Team

Platform owns authentication middleware, API gateway configuration, deployment pipelines, service templates, and observability libraries.

Platform does not own product-specific workflow business logic. Changes affecting product semantics require coordination with Applications.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

3. Applications Team

Applications owns OrbitFlow's workflow builder, versioning, execution history UI, and connector configuration.

Frontend changes are reviewed for accessibility and state complexity. Backend changes require API contract tests for important endpoints.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

4. Data Engineering

Data Engineering operates analytical pipelines and models.

Events are validated, transformed, and loaded into analytical storage. Product teams define business metrics while Data owns pipeline implementation.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

5. AI Systems

AI Systems owns embedding pipelines, vector indexes, retrieval services, prompt templates, model adapters, and evaluation tooling.

The team maintains benchmark datasets containing questions, relevant documents, and evaluation notes. Retrieval quality is measured separately from generation quality.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

6. Reliability

Reliability Engineering focuses on availability, monitoring, capacity, and incident response.

The incident commander coordinates mitigation. Significant incidents receive a documented timeline and follow-up actions.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

7. Security

Security reviews authentication, authorization, secrets, sensitive data, and external trust boundaries.

Credential compromise triggers rotation and escalation. Security does not own general availability unless security is the primary cause.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

8. Product

Product managers maintain problem statements, requirements, success metrics, and priorities.

AI features require explicit expected behavior and failure cases. Product and AI Systems jointly review evaluation datasets.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

9. Cross-Team Work

Beacon access control requires AI Systems, Security, Platform, and Product.

AI Systems owns retrieval, Security owns authorization policy, Platform owns identity propagation, and Product owns user-facing behavior.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.

10. Team Reference

For this fictional dataset, AI infrastructure questions should retrieve Sofia Alvarez's team.

Deployment infrastructure questions should retrieve Ravi Mehta's team. Analytics pipeline questions should retrieve Isaac Kim's team.

Testing note: This section contains source-of-truth fictional facts for semantic retrieval. Related concepts may appear in other documents with different details, allowing comparison of source relevance.
